

Commission on Judicial Performance

The Honorable Karla J. Hansen

2012 Judicial Performance Survey Report 4th Judicial District

March 26, 2012

The Honorable Karla J. Hansen El Paso County Judicial Complex P.O. Box 2980 Colorado Springs, CO 80903

Dear Judge Hansen:

I am pleased to make available to you the attached copy of your 2012 Judicial Performance Survey Report. This report includes the survey results from two important stakeholder groups: 1) attorneys who have had cases in your court or who are knowledgeable about your judicial performance; and 2) non-attorneys who have observed your performance in court or who have knowledge of your performance as a judge. In addition to this introduction, the report is divided into five main sections:

- 1. A brief summary of the results of the attorney and non-attorney surveys.
- 2. The numerical results of the survey of attorneys in both tabular and graphical form. In addition to the numerical results, this section also contains comments attorneys made about your judicial performance. In some instances the comments have been redacted to eliminate respondent identifying information. A copy of the attorney questionnaire is included in the final section of this report.
- 3. The numerical results of the survey of non-attorneys in both tabular and graphical form. In addition to the numerical results, this section also contains comments these respondents made on the subject of your judicial performance. In few instances the comments have been redacted to eliminate respondent identifying information. A copy of the non-attorney questionnaire is included in the final section of this report.
- 4. The fourth section of the report discusses the methodology of the surveys.
- 5. The final section provides copies of the questions or questionnaires that were used for each survey.

Hon. Karla J. Hansen March 26, 2012 Page 2

If you have any questions about the methodology and how the survey was conducted, please feel free to contact me at 505-821-5454 or by email at sanderoff@rpinc.com (please put the words "Judicial Performance" in the subject line), and for any other questions you might have about the survey please call the Executive Director of the Office of Judicial Performance Evaluation, Jane Howell, at 303-866-6465.

Best regards,

Brian Sanderoff

Brian Sanderoff

President

enc:

Summary of Results

Respondents rated judges on various questions using an A to F scale, in which the grades were then converted to numerical scores: A= 4, B=3, C=2, D=1 and F=0. An average score of 4.0 is the highest possible score and a 0.0 is the lowest possible score. On average, Judge Karla J. Hansen received an overall combined average grade of 3.43 in the 2012 Judicial Performance Survey. This is calculated by adding the overall average grade received from attorney respondents, 3.24, to the overall average grade received from non-attorney respondents, 3.62, divided by two.

The average combined grade for all county judges standing for retention in 2012 is 3.45 [not shown below].

Judge Hansen Average Grades (All Years)									
	Combined Attorney Non-attorn								
Overall Grade	3.43	3.24	3.62						
Sample Size	-	147	349						

Table 1

The results presented in this report are based on data collected in 2008, 2009, 2010, and 2011. (See Methodology section for description of sampling process.) Provisional judges will not have samples for the years prior to their appointment. Table 2 shows Judge Hansen's overall average grades for each year in which survey results are available.

	Judge Hansen Average Grades by Year										
	Combined	Atto	rney	Non-At	ttorney						
	Average	Average	Sample	Average	Sample						
Year	Score	Score	Size	Score	Size						
2008	3.07	2.61	9	3.53	55						
2009	3.41	3.13	36	3.68	76						
2010	3.55	3.30	41	3.80	56						
2011	3.47	3.36	61	3.57	162						
Overall	3.43	3.24	147	3.63	349						

Table 2

Comparison of Jurors vs. Non-Jurors Among Non-Attorney Population

Among the non-attorney population, jurors tend to grade judges much higher than non-jurors. The juror overall average grade for all county judges standing for retention in 2012 is 3.85, while the overall average grade awarded by non-jurors is 3.29. The effect of this is that judges with a higher percentage of jurors in their sample tend to have higher average grades in the non-attorney survey than those judges with a small percentage of jurors. The number of jurors in a judge's sample is, of course, closely related to the number of jury trials the judge presides over.

The table below shows Judge Hansen's non-attorney results broken out by jurors and non-jurors. It also shows the overall average juror and non-juror grades for all county judges standing for retention in 2012 (see two columns on far right).

Judge Hansen Average Grades for Jurors vs. Non-Jurors (All Years)

Methodology

The results shown in the 2012 Judicial Performance Survey Report are based on two surveys: The Survey of Attorneys Regarding Trial Judges, and the Survey of Non-Attorneys Regarding Trial Judges. Below is a description of the methodology used in the two surveys.

I Attorneys Regarding Trial Judges

a. Sample:

Research & Polling, Inc. received case data with the names of attorneys who had likely been in each judge's courtroom from the following primary sources:

- Colorado Judicial Department
- Colorado District Attorneys' Council
- Colorado Public Defender's Office
- Denver County Courts
- District Attorney's Office, Second Judicial District (Denver)
- District Attorney's Office, Ninth Judicial District

The data from these different sources are combined, duplicates removed, and addresses corrected.

In 2011, the following changes were made to the Attorneys Regarding Trial Judges survey process:

- Only judges that are standing for retention in 2012 were evaluated during this
 reporting cycle (the intent was to increase the number of completed attorney
 evaluations for each retention judge by excluding those not standing for
 retention).
- The number of possible judges that attorney respondents could evaluate was increased from seven to 10.

Attorneys are first mailed a letter inviting them to complete the survey online. The letter provides the link to the online survey, as well as a unique password to access the survey. Approximately one week later, attorneys are sent an email invitation to complete the online survey, which also provides the Web address and their unique password. About a week after the first email is sent, a reminder email is sent, providing the same information. Potential respondents who do not complete the survey after the second email are then telephoned and asked to either complete the survey by phone, or to complete it online.

Since 2010, the Judicial Performance Survey reports are based on a moving average, or rolling sample, of data collected over a period of time equal to the justice's or judge's term of office: ten years for a Supreme Court justice, eight years for a COA judge, six years for a district judge, and four years for a county judge. To use a county judge as an

example: as survey data is collected it is pooled together for four years. After four years, as new data is added to the judge's survey results, the oldest data in the pool is deleted.

b. Questions:

Respondents evaluated judges on 17 aspects of judicial performance using a grade scale of A, B, C, D, or F. (See Questionnaire section.) These grades were then converted to a numerical score where A = 4, B = 3, C = 2, D = 1 and Fail = 0. The A through F scale was chosen because it is almost universally recognized and understood. This makes it easy for respondents to complete their questionnaire, and for the public to interpret the results.

Respondents were also asked if they considered the judge biased toward the defense or prosecution in criminal cases. In a final question, respondents were asked to indicate how strongly they would recommend that the justice or judge be retained or not retained in office.

c. Comments:

Respondents were also asked what they considered to be the judge's strengths and weaknesses. By statute, these comments are confidential and only provided to the judge and the District Commission on Judicial Performance. They are not released to the public when the rest of the report is released. Before being given to the judge and the Commission, an attempt is made to redact all respondent identifying information from the comments.

Since 2005, there have been changes to the number of comment questions asked, though the strengths and weaknesses questions have been posed in every survey.

The number to the left of each comment refers to the same attorney respondent in both the strengths section and the weaknesses section.

Most spelling and typographical errors have been corrected.

d. Analysis:

The Attorneys Regarding Trial Judges section first shows a table of the percentage distribution for each of the A through F questions, including "don't know/not applicable" responses. The next column to the right shows the judge's average grade for each question. For comparison purposes, averages were also computed for all county judges standing for retention in 2012 and are shown in the furthest right column on the page. Tables showing the percentage distribution for all questions for all county retention judges are located at the end of this methodology section.

The overall question averages are calculated by adding up the averages for each question and dividing by the number of questions.

The next table shows the percentage distribution of the responses to the question about recommending retention. The first column of percentages is for the report-judge and the second column displays the percentages for all county retention judges. The

percentages are shown both including and excluding "undecided/don't know" responses.

The next page displays the question averages in horizontal bar-graph form. The percentage distribution to the retention question is then presented in the graph on the next page.

The third part of the Attorneys Regarding Trial Judges section of the report lists the comments the attorneys made about the judge's strengths and weaknesses.

e. Cooperation Rate:

The overall cooperation rate for the Attorneys Regarding Trial Judges Survey is calculated as the number of completed survey evaluations divided by the number of possible evaluations resulting in an overall response rate of 45.7% for district judges and 37.6% for county judges. An equivalent response rate for an individual judge is computed in the same manner.

II Non-Attorneys Regarding Trial Judges

a. Sample:

Research & Polling, Inc. received case data with the names of non-attorneys who had likely been in each judge's courtroom from the following primary sources:

- Colorado Judicial Department
- Colorado District Attorneys' Council
- Colorado Public Defender's Office
- Denver County Courts
- District Attorney's Office, Second Judicial District (Denver)
- District Attorney's Office, Ninth Judicial District

The data from these different sources are combined, duplicates removed, and addresses corrected.

In 2011, only the judges standing for retention in 2012 were evaluated. The intent was to increase the number of completed non-attorney evaluations for each retention judge by excluding those not standing for retention. For this evaluation cycle, the following changes were made to the Non-Attorneys Regarding Trial Judges survey process:

- Court staff, probation officers, and court interpreters were asked to complete the survey online, with the possibility of evaluating up to 10 judges
- RPI surveyed all non-attorneys with courtroom experience instead of a random sample of each sub-population (i.e. court employees, court interpreters, probation officers, witnesses, law enforcement personnel, jurors, crime victims, litigants, etc.). The only exception to this is the criminal defendants, for which RPI selected a random sample.

As stated above, court staff, probation officers, and court interpreters were asked to complete the survey online. They are sent an email invitation to complete the online survey, which also provides the Web address and their unique password. About a week after the first email is sent, a reminder email is sent, providing the same information.

Other non-attorneys were surveyed via standard mail. First, they were mailed an initial postcard informing the recipient that he or she would be receiving a questionnaire. Two to three weeks after the postcard was mailed, the potential respondent was sent a personalized introductory letter and a questionnaire with a postage-paid return envelope. If the person did not respond, a second questionnaire and letter were sent approximately four weeks later. Questionnaires are barcoded, and if a respondent mailed back two questionnaires, the second one was deleted from the data file.

Since 2010, the non-attorney section of the Judicial Performance Survey reports have been based on a moving average, or rolling sample, of survey results collected over a period of time equal to the judge's term of office: six years for a district judge and four years for a county judge. To use a county judge as an example: as survey data is collected, it is pooled together for four years. After four years, as new data is added to the judge's survey results, the oldest data in the pool is deleted.

b. Questions:

Respondents evaluated judges on 19 aspects of judicial performance using a grade scale of A, B, C, D, or F. (See Questionnaire section.) These grades were then converted to a numerical score where A = 4, B = 3, C = 2, D = 1 and Fail = 0. The A through F scale was chosen because it is almost universally recognized and understood. This makes it easy for respondents to complete their questionnaire, and for the public to interpret the results.

Respondents were also asked if they considered the judge biased toward the defense or prosecution in criminal cases. In a final question, respondents were asked to indicate how strongly they would recommend that the justice or judge be retained or not retained in office.

A copy of the questionnaire is included in the last section of this report.

c. Analysis:

The Non-Attorneys Regarding Trial Judges section first shows a table of the percentage distribution for each of the A through F questions, including "don't know/not applicable" responses. The next column to the right shows the judge's average grade for each question. For comparison purposes, averages were also computed for all county judges standing for retention in 2012 and are shown in the furthest right column on the page. Tables showing the percentage distribution for all questions for all county retention judges are located at the end of this methodology section.

The overall question averages are calculated by adding up the averages for each question and dividing by the number of questions.

The next table shows the percentage distribution of the responses to the questions about prosecution or defense bias and recommending retention. The first column of percentages is for the report-judge and the second column displays the percentages for all county retention judges. The percentages for the retention question are shown including and excluding "undecided/don't know" responses.

The next page displays the question averages in horizontal bar-graph form. The percentage distribution of the prosecution-defense bias and retention questions are then presented in the graph on the next page.

The third part of the Non-Attorneys Regarding Trial Judges section of the report lists the comments the non-attorneys made about the judge's strengths and weaknesses.

d. Comments:

In addition to the A through F questions, non-attorney respondents were asked what they considered to be the judge's strengths and weaknesses. By statute, these comments are confidential and only provided to the judge and the District Commission on Judicial Performance. They are not released to the public when the rest of the report is released. Before being given to the judge and the Commission, an attempt is made to redact all respondent identifying information from the comments.

Since 2005 there have been changes to the number of comment questions asked, though the strengths and weaknesses questions have been posed in every survey.

The number to the left of each comment refers to the same non-attorney respondent in both the strengths section and the weaknesses section.

e. Cooperation Rate:

The estimated cooperation rate for the non-attorney survey is calculated as the number of completed questionnaires divided by the number of eligible respondents who actually received a questionnaire. The following table shows the total number of questionnaires mailed, completed, non-responses and refusals, undeliverables, and other responses. The table presents the estimated overall cooperation rate as well as the cooperation rate by the different types of respondents. The true cooperation rates are likely higher than shown because of the percentage of people who were mailed questionnaires about judges with whom they may not have had sufficient experience. This is due, in part, to many cases being disposed of without the parties having appeared in court, as well as in the case of law enforcement, the data includes all those who were subpoenaed for a case, not just those who appeared.

A table of the response counts by respondent type for Judge Hansen is shown on the following page, and on the next page is a table of the overall cooperation rates for both the Attorney and Non-Attorney Regarding Trial Judges surveys for all county judges.

A Final Word Regarding the Survey Results

The most frequently asked question that we receive from judges regarding the survey statistics is, "What is the margin of sampling error associated with these results?" The answer to this question is that a margin of error cannot be calculated since **we are not selecting a random sample** of eligible respondents (attorneys and non-attorneys) to be surveyed; instead, we are attempting to survey **all** members of the eligible population. Since we are not generating a random sample, we cannot estimate a percentage or value of the population sampled with a known probability of error.

Every eligible respondent in the attorney and non-attorney population is now given an opportunity to evaluate judges with whom they have had a recent experience.¹ The only exception is among the criminal defendant population, in which, due to its size, a random sample is selected. The respondents know the purpose and content of the survey, and based on that, decide whether to respond to it. Measures are taken to increase the response rate so that concerns regarding sampling bias can be mitigated. The higher the response rate, the more confident we can feel the results of the respondents are similar to the results of the non-respondents. Attorneys and non-attorneys receive multiple waves of reminders via email or mail to complete the survey. Further, all non-responding attorneys are then contacted on the telephone and given the opportunity to complete the evaluation with the professional interviewer. RPI has contacted hundreds of non-responding attorneys to encourage their participation. We have been informed by the vast majority of the non-responding attorneys that the primary reason for not participating in the survey is because of a lack of sufficient information to evaluate that particular judge.

The Judicial Performance Evaluation Survey is a valuable means, perhaps the only practical means, for the Commissions on Judicial Performance to have a summary of results from structured interviews among stakeholders who have courtroom familiarity with each judge being evaluated. We are continuing to take steps to increase cell sizes and cooperation rates for each judge in order to further enhance this evaluation program.

¹Attorneys have the opportunity to evaluate up to 10 judges on an online survey. Among the non-attorney population, court staff, probation officers, and interpreters also have the opportunity to evaluate up to 10 judges on an online survey. The remaining non-attorney populations are mailed a paper survey with the opportunity to evaluate one judge.
