**The Honorable James Berkley Boyd**  
2006 Judicial Performance Survey  
9th Judicial District

April 26, 2006

The Honorable James B. Boyd  
Pitkin County Courthouse  
506 E. Main, Suite 300  
Aspen, CO 81611

Dear Judge Boyd:

Every two years the Colorado Judicial Performance Commission conducts a survey of people who have been in the courtroom of judges who face a retention vote in the next general election. The 2006 survey was conducted by Talmey-Drake Research & Strategy, Inc., who attempted to contact over 75,000 people who had been in these courtrooms in one capacity or another. Over 21,000 people responded—4,600 to the attorney survey and 17,000 to the non-attorney survey.

This report contains the results of those who were in your courtroom and who responded to the survey. In addition to this introduction, the report is divided into four main sections:

- **Attorney Results & Comments:** This section contains graphs displaying the average grade you received overall (the combined average from questions 1a through 5e), each section and each question. Following the graphs, are a series of tables showing the percentage distribution of responses to each question. Attorney respondents were also asked to comment about your performance. These comments have been transcribed, and in some instances redacted to eliminate respondent identifying information. A copy of the attorney questionnaire is at the back of this report.
- **Non-attorney Results & Comments:** Similar to the Attorney section, this portion of the report contains graphs (again including the overall average of questions 1a through 5c on the non-attorney questionnaire), the percentage distribution of responses by non-attorneys to each substantive question in the survey. The non-attorney respondents were also asked to comment about your performance. Again, these comments have been transcribed, and in some instances redacted to eliminate respondent identifying information. A copy of the non-attorney questionnaire is also at the back of this report.
- **Methodology:** The third section of the report discusses the methodology of the survey.
- **Questionnaires:** And the final section provides copies of the questionnaires that were used.

# **Methodology**

# Methodology

**Sample:** The Colorado Judicial Department provided Talmey-Drake Research & Strategy, Inc. with all the names and addresses of people from its ICON data base who in the previous 12 months had likely been in each judge's courtroom who was up for retention in November 2006. These names and addresses were then supplemented from the Colorado District Attorney's database (Blackstone system) and the databases of jurors, court employees and sheriff's security.

The data was then combined and cleaned. Where there were more than 400 potential respondents, a random sample was drawn. Included in the data cleaning was the identification of potential respondents in the sample who had appeared in more than two judges' courtrooms. Due to concerns about respondent fatigue, no more than two questionnaires were intended to be sent to any one respondent—though there were a few instances where one respondent did receive more than two questionnaires. Where a person had been in more than two judges' courtrooms, the selection criteria for which judge he or she would be sent questionnaires was generally: first, for the judge in whose courtroom the potential respondent had been in most often, and two, the judge with the smallest sample of the judges in whose courtroom the potential respondent had been in.

**Survey:** Starting in October 2005, each person in the sample database was mailed an initial questionnaire and an introductory letter with a postage-paid return envelope. Those who did not respond to the first questionnaire were then sent a second questionnaire and letter, and in some cases reminder postcards. During this process, the sample was augmented for judges with a particularly low number of completed questionnaires.

**Questionnaire:** The questionnaire used in the 2006 Judicial Performance Survey asked respondents to use a grade of A, B, C, D, or F (Fail) to assess the judge's performance in five different areas. For attorney these areas were Case Management, Application and Knowledge of Law, Communications, Demeanor and Diligence, and for non-attorney respondents the five were Demeanor, Fairness, Communications, Diligence and Application of Law. These scores were then converted to a numerical value where A = 4, B = 3, C = 2, D = 1 and Fail = 0. Copies of the questionnaires are included at the end of this report.

**Response:** The response rate is calculated as the number of completed questionnaires divided by the number of eligible respondents who actually received a questionnaire. The following table shows the total number of questionnaires mailed, completed, non-responses & refusals, undeliverables and other responses. The table presents the overall response rate as well as the response rate by the different types of respondents.

A similar table showing the response count and cooperation rate for your survey is provided at the end of this methodology section.

**Results:** The results of the Survey are in two main sections: Attorney Respondents and Non-attorney Respondents. Within each main section are three subsections graphs displaying average grades for each section and question, the percentage distribution of grades, and respondent comments.

**Graphs:** The graphs visually display the overall average numerical grades received for all grade questions, each section and each question compared to averages for all district or county judges, and all trial judges for which 2006 surveys were conducted. Questions relating to bias toward the defense or prosecution, sentencing and retention recommendation are also graphed.

**Percentage Distribution of Grades:** This section shows the percentage of each grade received on each question plus the bias, sentencing and retention questions. An average grade point for each graded question is computed and shown in the results section. A letter grade is also assigned to each grade point according to the following scale.

A = 4.00	B = 3.00 to 3.33	C = 2.00 to 2.33	D = 1.00 to 1.33
A— = 3.68 to 3.99	B— = 2.67 to 2.99	C— = 1.67 to 1.99	D— = 0.67 to 0.99
B+ = 3.34 to 3.66	C+ = 2.34 to 2.66	D+ = 1.34 to 1.66	Fail = 0.00 to 0.67

This section also includes two comparative columns of results: one comparative column shows the results for that question for all county or district judges (as appropriate) surveyed in 2006, along with a second comparative column showing the results for all trial judges in the 2006 survey.

**Comments:** Each respondent was encouraged to comment on the judge's performance. This section contains those comments.

**Sampling Error:**

All sample surveys are subject to what is known as sampling error—the extent to which the results of the sample survey may differ from what would be obtained if the entire population being surveyed had been interviewed. The size of the sampling error is almost entirely due to the number of people interviewed for the survey and the variance of responses.

The table below shows the extent of sampling error (95%-confidence interval) for various sizes of random samples and sample percentage results.

	Sample Size					
	25	50	100	150	200	300
Percentages near 10% or 90%	± 11.8%	± 8.3%	± 5.9%	± 4.8%	± 4.2%	± 3.4%
Percentages near 20% or 80%	± 15.7%	± 11.1%	± 7.8%	± 6.4%	± 5.5%	± 4.5%
Percentages near 30% or 70%	± 18.0%	± 12.7%	± 9.0%	± 7.3%	± 6.4%	± 5.2%
Percentages near 40% or 60%	± 19.2%	± 13.6%	± 9.6%	± 7.8%	± 6.8%	± 5.5%
Percentages near 50%	± 19.6%	± 13.9%	± 9.8%	± 8.0%	± 6.9%	± 5.7%

For example, suppose a reported percentage is 80% in a sample size of 150, then one could expect that 95% of the time that a random sample of the same size and collected the same way would include the true population percentage within the range of 80% plus or minus 6.4%.

Averages such as grade points also have a 95% confidence interval, however it is not so easily displayed in a table as confidence intervals about a percentage. Suffice it to say that the confidence interval about a score generally increases with smaller sample size.
